SUNCOAST CONNECTOR
TASK FORCE FINAL REPORT
November 15, 2020

INTRODUCTION AND OVERVIEW

Section 338.2278, Florida Statute (F.S.) created the Multi-use Corridors of Regional Economic Significance (M-CORES) Program. The purpose of the program is to revitalize rural communities, encourage job creation, and provide regional connectivity while leveraging technology, enhancing the quality of life and public safety, and protecting the environment and natural resources.

The statute directs the Florida Department of Transportation (FDOT) to advance the construction of regional corridors intended to accommodate multiple modes of transportation and multiple types of infrastructure in three defined study areas:

- Suncoast Corridor, extending from Citrus County to Jefferson County;
- Northern Turnpike Corridor, extending from the northern terminus of the Florida Turnpike northwest to the Suncoast Parkway; and
- Southwest-Central Florida Corridor, extending from Collier County to Polk County.

The statute specifies these corridors as part of a broader program to address the complete statutory purpose of M-CORES, including revitalizing rural communities and enhancing economic development. The statute also provides FDOT with direction and tools to help advance other regional goals related to the statutory purpose, including enhancing quality of life and protecting the environment. The breadth of the program’s purpose, the scale of the identified corridors, and the additional tools provided to FDOT all point to the need for a thoughtful, collaborative approach to implementing the M-CORES program, analyzing corridor needs and alternatives, and building consensus around future actions among FDOT and a wide range of partners.

The statute directed FDOT to convene a Task Force for each corridor as an inclusive, consensus-building mechanism comprised of representatives from state agencies, regional planning councils, metropolitan planning organizations, water management districts, local governments, environmental groups, business and economic development groups, and the community. Members of each Task Force were appointed by the FDOT Secretary.

The statute charged each Task Force with:

- coordinating with FDOT on pertinent aspects of corridor analysis, including accommodation or co-location of multiple types of infrastructure;
- evaluating the need for, and the economic, environmental, hurricane evacuation, and land use impacts of, the specific corridor;
- considering and recommending innovative concepts to combine right of way acquisition with the acquisition of lands or easements to facilitate environmental mitigation or ecosystem, wildlife habitat, or water quality protection or restoration;
• addressing issues related to specific environmental resources and land uses identified in each study area;
• holding public meetings in each local government jurisdiction in which a project in the identified corridor is being considered; and
• issuing its evaluations in a final report to the Governor, the President of the Senate, and the Speaker of the House of Representatives.

This report summarizes the activities and recommendations of the Suncoast Corridor Task Force.

Due to the early stage of planning for this corridor and the limited data and analysis on potential need and impacts available at this time, the Task Force was not able to fully address its charge of evaluating the need for and impacts of the Suncoast Corridor. The Task Force identified a series of potential high-level needs for future evaluation by FDOT and developed recommendations for how FDOT should assess the need for a corridor of the scale specified in statute. The Task Force did not reach a conclusion based on the information available at this time that there is a specific need for a completely new greenfield corridor through the study area to achieve the statutory purpose. The Task Force expressed a preference for improvement or expansion of existing major highway corridors or existing major linear utility corridors. The Task Force acknowledged the process for FDOT to consider a “no build” alternative in future project development activities until a final recommendation about each specific project is made. The Task Force also recommended guiding principles, instructions, and an action plan as a set of directions to FDOT and other partners for future planning, project development, and implementation activities related to the M-CORES Program.

In completing this report, the Task Force’s intent is to provide consensus recommendations for how FDOT can work with local governments and other agencies and partners to carry out the M-CORES Program as specified in s. 338.2278, F.S. Consensus on the report does not constitute agreement by all Task Force members that at this phase in program delivery, project-specific needs or environmental and economic feasibility are fully developed. Rather, the report is intended to provide consensus recommendations for how needs should be evaluated and how corridor development and related activities should move forward to implement the statute and support the environment, quality of life, and prosperity of the study area and the state.

The statute charges FDOT, to the maximum extent feasible, to adhere to the recommendations of each Task Force in the design of the multiple modes of transportation and multiple types of infrastructure associated with the corridor. The Task Force recommended, and FDOT committed to, an action plan for future activities in this study area consistent with the guiding principles and instructions.
TASK FORCE OVERVIEW

Membership
In August 2019, FDOT convened the Suncoast Corridor Task Force with 41 members representing state agencies, water management districts, local governments, metropolitan planning organizations, regional planning councils, environmental groups, business and economic development groups, and community organizations (see Appendix A for Membership List).

Meetings
The Task Force met 13 times between August 2019 and October 2020 through nine Task Force meetings and four webinars or virtual meetings. Over the course of 15 months, the Task Force reviewed data, trends, and issues; discussed key considerations for planning transportation corridors, including specific issues as identified in Florida Statute (see box); and received and reviewed public input. Subject matter experts joined the Task Force meetings to provide information related to specific aspects of the Task Force’s charge, including community planning, economic and workforce development, agriculture, environmental resources, broadband and utilities, emerging technology, and emergency management. The Task Force developed specific recommendations for identifying and evaluating high-level needs related to the statutory purpose, as well as guiding principles and instructions for advancing corridor development and related activities to help accomplish these needs, as documented in subsequent sections of this report. The Task Force also recommended an action plan for moving forward.

In March 2020, some unique challenges arose resulting from the COVID-19 pandemic. The Task Force adapted meeting formats to comply with the Governor’s Executive Order Number 20-122. The later Task Force meetings were conducted with a combination of virtual and in-person locations for both Task Force members and the public to participate (see Appendix B for the Work Plan and Appendix C for Meeting Locations).

Issues for Consideration by All M-CORES Task Forces
s. 338.2278 (1), Florida Statute
- Hurricane evacuation
- Congestion mitigation
- Trade and logistics
- Broadband, water, and sewer connectivity
- Energy distribution
- Autonomous, connected, shared, and electric vehicle technology
- Other transportation modes, such as shared-use nonmotorized trails, freight and passenger rail, and public transit
- Mobility as a service
- Availability of a trained workforce skilled in traditional and emerging technologies
- Protection or enhancement of wildlife corridors or environmentally sensitive areas
- Protection or enhancement of primary springs protection zones and farmland preservation areas designated within local comprehensive plans adopted under Chapter 163.

Issues for Consideration by Suncoast Corridor Task Force
s. 338.2278 (3) (c) 8, Florida Statute
Evaluate design features and the need for acquisition of state conservation lands that mitigate the impact of project construction within the respective corridors on:
- The water quality and quantity of springs, rivers, and aquifer recharge areas;
- Agricultural land uses; and
- Wildlife habitat.
A facilitator and staff supported the Task Force meetings to assist with discussions, provide technical support, and document the Task Force’s deliberations and recommendations. Additional documentation of the Task Force activities including meeting agendas, materials, and summaries can be found on the project website www.FloridaMCORES.com.

Data and Mapping Tools
FDOT staff developed and maintained a Geographic Information System (GIS) tool to provide the Task Force with access to a wide variety of data on existing demographic, economic, land use, environmental, infrastructure, and other resources in the study area. This tool was specifically used to help identify areas where direct impacts from corridors should be avoided, as well as areas where a connection to a corridor may be appropriate for future evaluation. FDOT staff conducted one-on-one technical briefings to provide Task Force members with a tutorial of the GIS tool and to discuss data-related questions. The Task Force used the GIS tool to help understand the linkage between draft guiding principles and potential corridor location decisions. Task Force members suggested other data sources related to topics such as conservation lands, water resources, and wildlife habitat that were included in the tool as GIS layers for Task Force discussion to support development of guiding principles and instructions.

The GIS tool served as a living tool and was updated based on feedback and suggestions from the Task Force members. The GIS tool remains publicly accessible at all times on the project website including through a mobile-friendly format.

Public Engagement
Public engagement was a critical component of the Task Force process. The public engagement process was designed to allow residents and visitors to comment on all Task Force deliberations, products, and the report. This was made available 24/7 through the 15-month process, using a variety of media options.

Opportunities for public engagement were included at each Task Force meeting through a dedicated public comment period. At in-person meetings, comment stations were made available to receive written comments. The Task Force meetings that were held in-person included Tampa (Hillsborough County), Lecanto (Citrus County), Perry (Taylor County), and Madison (Madison County). Virtual webinars and hybrid Task Force meetings were held following the COVID-19 outbreak between April 2020 and October 2020. Several Task Force meetings were broadcast live on The Florida Channel, and all recordings were posted on the project website for members of the public who could not attend in person. The public could also attend the webinars and hybrid meetings virtually through the GoToWebinar platform and public viewing locations. Overall, a total of 568 people attended the in-person meetings, and 1,271 people attended the webinars and hybrid virtual meetings. See Table 1 for a summary of the Suncoast Corridor Task Force Meetings. (To be updated in final report)

To further public engagement, eight Community Open Houses were held, covering each county within the study area. The Community Open House meetings were held in Old Town, Mayo, Perry, Chiefland, Crystal River, Monticello, Trenton, and Madison to share information about the process and receive public input. Due to the COVID-19 pandemic, the last three Community Open Houses were held as a combination of hybrid in-person and virtual meetings. At the meetings, members of the public were able to directly ask questions of FDOT staff, view informational material, and experience hands-on use of the GIS tool. A total of 588 people participated in the eight open houses. See Table 2 for a summary of the Suncoast Corridor Task Community Open House Meetings.

*Note: Joint meetings held with the Northern Turnpike Corridor

Additionally, FDOT received communication 24/7 through the project website, FDOT Listens email address, phone, social media, letters, newsletters, and more. In total, FDOT received 1,875 unique and 10,477 form-letter comments through these communication methods, which were shared with the Task Force. (To be updated in final report).

The comments varied from significant concerns over the development of these corridors due to their potential environmental, community, rural lifestyle, and financial impacts to strong support for the corridors due to their potential mobility, economic development, infrastructure, and hurricane evacuation benefits. In addition, there was concern about the timing of this process and project cost given the COVID-19 pandemic. A key theme of many public comments was a discussion or request that the no-build alternative be considered, or opted for, prior to the project phases that would occur after the Task Force Final Report. The Task Force was provided with periodic summaries of the comments received as well as copies of all comments, so this public input could be considered in the development and refinement of the Task Force’s recommendations. A detailed summary of the public comments can be found on the project website. A summary of the most common comments/themes received from the public are included below.

- Concern for impacts to wildlife habitat (946 comments)
- Concern for impacts to property and rural quality of life (783 comments)
- Support to expand, improve, and maintain existing roads (421 comments)
- Need to improve and protect water resources and the aquifer (421 comments)
- Concern over project cost (367 comments)
- Need for protection and enhancement of conservation lands (356 comments)
- Support the need for jobs, economic development and business enhancements; but concern over potential negative economic impacts (269 comments)
- Concern over the cost of tolls (256 comments)
- Concern for impacts to wetlands (169 comments)
- Concern for increased water, ground, and air pollution (147 comments)
- Need for hurricane evacuation (144 comments)
- Concern over location/project alignment or route (137 comments)
The draft Task Force report was posted for a 15-day public comment period from September 29-October 14, 2020. A total of # members of the public submitted a total of # comments during that period. A copy of these comments and a summary of the key themes was provided to the Task Force at its final meeting. (To be summarized when final).

In addition to engaging the public, FDOT conducted active engagement with partners. FDOT provided # presentations to interested agencies and organizations at their workshops, meetings, and conferences. FDOT staff also attended metropolitan planning organization, regional planning council, and local government council and commission board meetings to share updates on the Task Force’s process and answer any questions. The Task Force also considered resolutions adopted by the Board of County Commissioners in Citrus County, Levy County, and Madison County; City Commission in the City of Cedar Key; Town Council of the Town of Greenville; and the Hernando/Citrus Metropolitan Planning Organization. The Task Force also considered letters from the Town of Bronson, the City of Chiefland, the City of Williston, and the Town of Yankeetown. A summary of the local government resolutions and letters is included in Table 3. Copies of these documents can be found on the project website.

*Note: Outside of study area*
STUDY AREA OVERVIEW

The Suncoast Corridor study area is located along Florida’s Nature Coast through Citrus, Dixie, Gilchrist, Jefferson, Lafayette, Levy, Madison, and Taylor Counties and is home to more than 280,000 residents (Figure 1).

Environment
The predominately rural counties located within the Suncoast Corridor study area contain natural resources, landscapes, and public lands that have been highly attractive to residents and year-round visitors for decades. This area has many unique features and natural resources including rivers, springs, wetlands, aquifer recharge areas, coastal areas, conservation areas, state parks, and agricultural lands. Some notable resources include the Big Bend Seagrasses Aquatic Preserve, the Flint Rock and Aucilla Wildlife Management Areas, the Suwannee and Santa Fe Rivers, Blue Springs, Fanning Springs, Crystal River, and the Goethe State Forest. The study area also contains numerous large acreage conservation easements. These areas support significant fish, wildlife, and plant populations including threatened and endangered species such as the West Indian manatee, the Florida scrub-jay, and the gopher tortoise. The study area also includes an abundance of prime farmlands and agricultural properties that serve both economic and environmental functions in addition to Spring Protection and Recharge Areas, prospective Florida Forever Lands on the current priority lists for acquisition, and Florida Ecological Greenways Network critical linkages.

Community
The population of the eight-county study area is projected to increase approximately 15% by 2045, adding over 40,000 more residents to the area (Table 4).

*Note: Population forecasts were developed prior to COVID 19

Citrus County currently contributes almost half the population of the study area and will account for most of the population growth in the future. Citrus, Gilchrist, and Lafayette Counties are projected to have the highest growth by 2045 (approximately 20%) with Dixie and Madison Counties projected to have the lowest population growth (approximately 3%) during the same period. The state’s projected population increase is approximately 29% during this same time period, nearly twice the growth rate of the overall study area. Population within the study area is mostly driven by domestic migration from other parts of the state. All of the counties in the study area, except Gilchrist, experienced more deaths than births over the last decade, reflecting an older population.\(^2\)

The study area is a blend of coastal and inland areas, which are mostly rural and agricultural with conservation areas, small towns, and scattered suburban communities. Approximately 88% of the land is in agricultural or recreation/park use, while residential use accounts for approximately 8% of the overall land use.\(^3\) The remaining 4% of land uses are comprised of primarily industrial, institutional, and commercial development. While mostly rural in nature, there are 21 towns and cities within the study area with an abundance of community resources including schools, parks, places of worship, and downtown main streets. There are also several historic resources within the study area including the Monticello Historic District, the Crystal River Archaeological Site, and the Letchworth-Love Mounds Archaeological State Park.

As one of the more rural areas of the state, the study area has limited infrastructure and lower levels of adequate broadband internet access, sewer and water service, and transit than the rest of the state. In addition, all of the counties have limited access to fresh food (within half a mile) and significantly lower access to healthcare (hospitals and physicians) than the rest of the state. Dixie, Gilchrist, Jefferson, and Lafayette Counties do not have any hospital facilities, and all of the counties (except for Citrus) have fewer than 10 licensed physicians.\(^4\) These deficiencies affect the quality of life for residents in the study area and limit the ability to attract new residents and businesses. Future vision and land use plans for the counties in the study area generally focus on the need to protect and enhance the

---

3 FDOT Generalized Land Use, Florida Dept. of Revenue (2015), and University of Florida (UF) Institute of Food and Agricultural Science Florida Agriculture 2018 Fast Facts.
4 Florida Department of Health. *County Health Profiles and Resource Availability 2018.*
environment and quality of life for residents while providing economic opportunity and growth in an environmentally and economically sustainable manner.

Economy

The local economy within the study area is primarily based on the trade, education, healthcare, and construction industries. In addition, all of the counties list government services as one of their top employers with many residents working in the county government (administration and schools) and state correctional institutions. Several counties also list agricultural businesses as some of their largest employers. The presence of various natural resources also provides local economic benefits as the study area has successful and growing mining, silviculture, and ecotourism industries.

All eight counties have a median household income below the 2017 state median income ($50,833) and all counties (except Jefferson County) have a poverty rate that exceeds the 2017 state poverty rate (15.5%). In addition, educational attainment levels are lower in all eight study area counties than the state average and the unemployment rates for counties within the study area have historically been near or above the state unemployment average. All of the counties, except for Citrus, have been designated by the Governor as Rural Areas of Opportunity in need of expansion of economic development projects. Specific areas targeted for economic development include the City of Monticello, the City of Madison, the Town of Greenville, the Town of Cross City, northern Gilchrist County, northern Lafayette County, the City of Perry, and northeast Citrus County.

Infrastructure

Much of the study area is served by state highways and county roads with varying speed limits and partial or full access. Many of these facilities are older and were not developed with the benefit of environmentally sensitive design features and modern stormwater facilities. There are no high-speed, high-capacity transportation facilities in the central portion of the study area. There are two high-speed, high-capacity facilities within the study area at the northern- and southern-most boundaries. The Suncoast Parkway (S.R. 589) is a toll road that runs north out of the Tampa Bay region in the southern portion of the study area and terminates in Citrus County. I-10 runs east-west across the state at the northern portion of the study area through Jefferson and Madison Counties. I-75, located east of the study area, is the only north-south high-speed, high-capacity transportation facility serving this area. There is also freight rail located in the northern and southern ends of the study area; however, there is no rail within the central portion of the study area. The CSX “S” line, a major north-south freight line in the state, is located east of the study area and I-75.

While detailed traffic analysis for the corridor has not been conducted at this stage, there is some transportation data for the general area that provides some framework for traffic conditions. Preliminary traffic data shows that approximately 60% of vehicular trips stay within the study area, 30% of the trips are to and from the study area, and only 10% of the trips pass through the study area. In addition, future traffic conditions modeling, based on growth projections developed prior to COVID-19, indicate that while some roadways within the study area are underutilized, portions of I-75 (east of and outside the study area) and several roadways within the study area could operate at a poor Level of Service (LOS) E or F with high to excessive levels of delay at peak times by the year 2050. FDOT analyzed

7 AirSage, Inc. Study Area Daily Trips Summary 2016.
future traffic in the study area based on population growth projections from local government comprehensive plans. Based on improvements currently in the FDOT Work Program and existing cost-feasible plans for the Strategic Intermodal System and MPOs in the study area, this traffic growth could produce significant congestion along much of I-75 and portions of U.S. 41, S.R. 44, S.R. 200, and S.R. 121 by the year 2050.  

Approximately 3,800 vehicle crashes resulting in nearly 90 deaths occurred along the state highway system within the study area in 2018. In addition, there was a 44% increase in total traffic fatalities from 2010 to 2018 in the study area, compared to 28% statewide over the same period. In addition, I-75, the contiguous north-south high-speed, high-capacity transportation corridor, also experiences crashes above the state average. Mobility options are limited within the study area as most existing roadways do not provide transit or safe bicycle and pedestrian facilities. In addition, five counties within the study area (Citrus, Levy, Dixie, Jefferson, and Taylor Counties) are coastal counties susceptible to hurricanes and storm surge with designated emergency evacuation zones.

As previously noted, the study area has lower levels of adequate broadband internet access than the rest of the state. According to the Federal Communications Commission, all eight counties in the study area are below the Florida average (96.2%) for access to fixed-speed broadband internet. Only 1% of residents in Dixie County and fewer than 20% of residents in Levy County have access to the common standard of broadband speed of at least 25 megabits per second (Mbps) download. In addition, some portions of the study area have no broadband service, and many residents are unable to afford what service is available.

**RECOMMENDATIONS**

**APPROACH AND FRAMEWORK**

The Task Force recognized the scope of the M-CORES purpose and program, as well as the scale of the corridors authorized in statute, called for thoughtful decision making supported by the best available data, analysis, and subject-matter expertise and extensive public input. The Task Force recognized decisions about where these corridors should be located and how they should be developed, particularly in relation to environmental resources and existing communities, could have transformational impacts on the study area and the overall state.

Since the Task Force process was designed to occur prior to the corridor planning process, the Task Force was not able to review data on nor discuss every potential impact of the corridor in detail. The Task Force focused on developing recommendations for how FDOT and other agencies should implement the M-CORES program in this study area in three areas:

- **High-Level Needs** – The Task Force identified key opportunities and challenges related to the six statutory purposes for M-CORES that should be priorities for the M-CORES program in the study area. The Task Force also developed guidance for how FDOT should work with partners to evaluate these potential needs and form more specific purpose and need statements for

---

corridor improvements moving forward. The high-level needs, along with the purpose, answer the question “why?”.

- **Guiding Principles** – The Task Force recommended a set of core values to guide decision-making related to the M-CORES program in the study area throughout the planning, development, and implementation process. These answer the question “how?”.

- **Instructions for Project Development and Beyond** – The Task Force recommended specific instructions for future project development and implementation activities to ensure the Task Force’s guiding principles are applied to subsequent activities as intended. These answer the question “what’s next?”.

In completing this report, the Task Force’s intent is to provide these consensus recommendations for how FDOT can work with other agencies and partners to effectively carry out the M-CORES program as specified in s. 338.2278, F.S. Consensus on the report does not constitute agreement by all Task Force members that, at this phase in program delivery, project-specific needs or environmental and economic feasibility are fully developed. Rather, the report is intended to provide consensus recommendations for how needs should be evaluated and how corridor development and related activities should move forward to implement the statute and support the environment, quality of life, and prosperity of the study area and the state.

s. 338.2278 (3)(c) 6, F.S. states “To the maximum extent feasible, the department shall adhere to the recommendations of the task force created for each corridor in the design of the multiple modes of transportation and multiple types of infrastructure associated with the corridor.” The Task Force viewed this statement as inclusive of all of the recommendations contained in this report and applicable to all activities associated with the M-CORES program. The Task Force also recognized that, as future work continues in the study area, additional information or changing conditions may provide insight about the feasibility and value of specific implementation steps that could warrant refinements to specific recommendations. In these situations, the guiding principles and intent of the Task Force will guide any such refinements.

**High-Level Needs**

Development of major transportation projects typically begins with a definition of purpose and need for the project. The purpose identifies the primary goals of the project, and the need establishes the reason for the project based on deficiencies, issues, and/or concerns that currently exist or are expected to occur within the study area. A need typically is a factual, objective description of the specific transportation problem supported by data and analysis.

Section 338.2278 (3)(c) 4, F.S., charged the Task Force to “evaluate the need for, and the economic and environmental impacts of, hurricane evacuation impacts of, and land use impacts of the corridor on which the Task Force is focusing. The Task Force reviewed partner and public input, existing plans and studies, and available data and forecasts on trends and conditions in the study area. FDOT provided preliminary baseline forecasts for future population, employment, and traffic; however, the amount and precision of the information provided was not sufficient to define specific corridor needs prior to the initiation of project development. Based on the information provided, the Task Force identified potential high-level needs for the corridor and developed recommendations for how FDOT should assess the needs for a corridor of the scale specified in statute as part of future planning and project development.
High-level needs are key opportunities and challenges that the M-CORES program, including corridor investments and related actions, are intended to address. The high-level needs build on the six purposes and 13 potential benefits in s. 338.2278 (1), F.S. The potential high-level needs include conventional transportation needs such as safety, mobility, and connectivity, as well as broader needs that could be supported through a transportation corridor, such as economic development, environmental stewardship, and quality of life.

In general, the Task Force found significant high-level needs in the study area related to the six statutory purposes, including revitalizing rural communities, supporting economic development, enhancing quality of life, and protecting the environment. The Task Force recognized general needs to enhance transportation safety, mobility, and connectivity; however, they did not identify a specific need for a completely new greenfield corridor across the entire study area based on the available information at this time. It is important to note that The Federal Highway Administration (FHWA) defines a greenfield corridor as designed from the beginning with no constraints from the existence of prior facilities that need to be modified or removed. The Task Force identified a series of potential high-level needs for future evaluation by FDOT:

- **Support projected statewide and regional population and economic growth**
  
  FDOT preliminary traffic analysis indicates that projected state and regional population and economic growth (based on forecasts developed prior to COVID-19) could produce congestion along portions of I-75, U.S. 41, S.R. 44, S.R. 200, and S.R. 121 by the year 2050. The Task Force recommended further refinement of these traffic projections, including evaluation of whether potential improvements to or development of a new or enhanced inland corridor would relieve future traffic on I-75, as well as whether traffic on the Suncoast Corridor would be impacted by completion of the Northern Turnpike Corridor. The Task Force recommended that the traffic analysis consider future demand for moving both people and freight, including both local/regional travel originating and terminating within the study area and statewide/interregional travel to, from, and through the study area. The traffic analysis also should consider potential changes in travel demand related to recovery from COVID-19 and potential long-term changes in travel behavior, such as greater propensity for working from home and increased home delivery of goods and services. The analysis also should consider potential changes in travel demand and transportation system capacity related to increased use of emerging technologies such as automated and connected vehicles and the next generation of mobility. Finally, the analysis should consider potential shifts in economic activity that could be related to a significant industry expansion or recession during the analysis period.

  The Task Force also recommended that FDOT use population and economic growth projected in local government comprehensive plans and/or the metropolitan planning organization long-range transportation plans and the Florida Transportation Plan (FTP) as the baseline for estimating future travel demand in the study area. These projections generally are consistent with the mid-range projections developed annually by the University of Florida Bureau of Economic and Business Research (BEBR), which could serve as a proxy for those counties which have not updated their comprehensive plans in recent years.

- **Improve safety, mobility, and connectivity through access to a high-speed, high-capacity transportation corridor for people and commercial goods**
  
  The Task Force discussed and received subject matter and public input on how access to high-capacity transportation corridors that provide interregional connectivity is a key factor for business
recruitment and retention, particularly for underserved rural areas in need of economic enhancement. They also emphasized the need to have a better understanding of the potential impacts and how the Suncoast Corridor and Northern Turnpike Corridor would affect the existing transportation network, including whether development of these corridors would relieve traffic on existing roadways (such as I-75) and divert traffic to/from northwest Florida and the study area. The Task Force recommended additional refinement of traffic analysis (as noted in the previous bullet) in addition to working with local governments on potential operational improvements, existing facility enhancements, and interchange locations.

- **Protect, restore, enhance, and connect public and private environmentally sensitive areas and ecosystems**

  The Task Force reviewed multiple data sources and maps and discussed the unique characteristics of the region’s environment and natural resources including aquifer recharge areas, major watersheds, springs, rivers, farmlands, wildlife habitats, native plants, and ecosystems within the study area. They discussed how these resources need protection and enhancement and that many have already been identified for conservation and acquisition. The Task Force recommended guiding principles and instructions for how the M-CORES program could help achieve environmental goals, including proactive opportunities to restore, connect, and enhance resources. The Task Force recommended that FDOT give particular attention to these resources through application of these guiding principles in addition to standard project development and environmental review processes.

- **Enhance travel options and safety for all transportation users**

  FDOT presented recent crash data within the study area indicating that traffic fatalities over the last decade are higher than the state average during the same period. The Task Force also heard how mobility options are limited within the study area as most existing roadways do not provide transit or safe bicycle and pedestrian facilities. The Task Force received subject matter and public input on the need for transportation facilities that use innovative design and technology to improve automobile safety, reduce the number of incidents, and accommodate multi-modal transportation, including multi-use trails separated from the roadway. They also discussed the need to have a better understanding of whether a new or enhanced corridor would improve safety and whether other modes of transportation could be developed independent of a roadway. The Task Force recommended guiding principles and instructions that the corridor safely accommodate and enhance multiple modes of transportation (pedestrian, bicycle, transit, and rail) and that strategies and technology be explored to reduce incidents and improve response.

- **Enhance emergency management at the local, regional, and state levels**

  The Task Force heard from an industry expert on emergency response planning and discussed evacuation and sheltering needs as five counties within the study area are coastal counties with emergency evacuation zones. In addition, they discussed how I-75 serves as the primary evacuation/response route for the study area in addition to large portions of central and southwest Florida, including the heavily populated Tampa Bay region. The Task Force discussed the need for the State Comprehensive Emergency Management Plan, local emergency management and response plans, and the Statewide Regional Evacuation Studies to inform and support the needs within and through the study area. The Task Force discussed the ongoing updates to the Statewide Regional Evacuation Studies underway by the Florida Division of Emergency Management and asked FDOT to consider those studies as they will provide updated information including evacuation
zones, travel behavior, and sheltering needs. They also suggested that FDOT conduct analysis that documents mobility and connectivity needs related to both routine daily traffic and special events such as evacuation and response to major emergencies and disasters.

- **Improve access to ecotourism and recreational assets**
  The Task Force discussed the multitude of natural resources that are vital to the ecotourism and nature-based recreation industry in the study area. They also received subject matter and public input on how many of the outdoor activities and resources in the study area not only create economic development opportunities for local businesses, but also provide unique opportunities for recreation, wildlife viewing, and the ability to develop an appreciation of the natural environment and conservation. The Task Force recognized the importance of access to the resources in addition to the need to protect and enhance the very resources that serve as the basis for the industry and draw many residents to live in the area.

- **Enhance economic and workforce development, access to education, and job creation**
  The Task Force reviewed socio-economic data for the study area and heard from subject matter experts, local governments, and the public on the challenges in the study area with regards to employment and educational opportunities. They discussed how key demographic statistics indicate the need for increased opportunities for educational attainment, job training, workforce development, and overall economic development within the study area. The Task Force also discussed the potential for infrastructure improvements (roadway, multi-modal, and communications) to create a competitive environment to attract businesses, investment, and talent to a region. They also discussed the need for FDOT to consider the positive and negative mobility, economic, and fiscal impacts of potential shifts in economic activity from existing communities and corridors to enhanced or new corridors, as well as potential net economic benefits to the region and state. They also suggested working with businesses and economic development organizations to fully evaluate and understand these economic development needs as the corridor moves forward and consider ways that FDOT and the M-CORES program can support and build on their existing economic development plans.

- **Improve connectivity to agricultural businesses, manufacturing, warehousing, freight terminals, and intermodal logistics centers**
  The Task Force reviewed GIS data of available transportation facilities and received subject matter and public input on the importance of centrally located high-speed, high-capacity corridors for logistics and movement of commercial goods and agricultural, forestry, and mining products. They recognized that while transportation is often a vital component to ensure economic competitiveness of these business, agricultural and rural land also need protection and enhancement to be productive. They also discussed the fact that several counties have already identified areas for farmland preservation and those areas should be taken into consideration. The Task Force recommended additional analysis be conducted in addition to working with local governments and stakeholders (businesses, farmers, organizations, etc.) to fully evaluate and understand emerging trends and connectivity needs as the corridor moves forward.

- **Expand rural broadband infrastructure and access to broadband service**
  The Task Force reviewed data on the limited availability of broadband access within the study area. They heard from experts on a utility panel and the public on how broadband is crucial for education,
employment, business operations, and access to healthcare and has become part of a community’s critical infrastructure. They discussed how the lack of access to healthcare (physicians and hospitals) and college/technical schools within the rural study area increases the need for improved broadband service for virtual healthcare and learning opportunities. The Task Force recommended additional analysis be conducted to see if there are ways to accommodate increased broadband independent of a transportation facility and consider programs that make the service more affordable. There was also discussion on the need to consider expansion of other utility needs at a regional scale.

- Preserve and improve the rural character and quality of communities
  The Task Force discussed and heard from the public on the importance of preserving the character of the area and protecting the variety of community resources in the study area including downtowns, parks, schools, places of worship, and various cultural (historic and archaeological) resources. While a key purpose of M-CORES is to revitalize rural communities with additional infrastructure and economic development opportunities, input from the Task Force members and the public emphasized the importance of preserving the quality of life in these communities. The Task Force stressed the importance of working with local communities, listening to their concerns and preferences, and understanding their goals and visions throughout the corridor development process. They also discussed the need for minimization of negative impacts to the human environment to ensure the corridor does not negatively impact the very communities it was designed to improve.

Needs Evaluation Process
As input to project development, FDOT will work with partners to conduct a robust evaluation of the potential high-level needs in the study area, building on the recommendations of the Task Force. This process will evaluate and distinguish between conventional safety, mobility, and connectivity needs, and broader regional needs related to transportation that also are included in the statutory purpose in s. 338.2278, F.S. Additional details on the needs evaluation process as well as the steps involved in identifying and evaluating alternatives are specified in the Action Plan on page 28 of this report.

The Task Force did not reach a conclusion based on the information available at this time that there is a specific need for a completely new greenfield corridor through the study area to achieve the purposes required by s. 338.2278, F.S. The Task Force expressed a preference for improvement or expansion of existing major highway corridors or existing major linear utility corridors that already have disturbed right of way.

The Task Force believed that the formal determination of need pursuant to statutory requirements and consistent with accepted statewide processes is an important milestone in corridor planning and development. The Task Force developed a series of guiding principles and instructions for future planning and development of corridors for which high-level needs have been identified, including analysis of the “no-build” option. While these determinations will be made after the Task Force has completed its deliberations, the guidance provided by the Task Force will instruct the evaluation process and FDOT will create ongoing opportunities for partners and the public to be engaged during the process.

Guiding Principles and Instructions
The Task Force recommended guiding principles and instructions that are intended to function as a set of directions to FDOT and other partners as they carry out future planning, project development, and implementation activities related to the M-CORES program in s. 338.2278, F.S. These guiding principles and instructions are intended to supplement the requirements of current FDOT processes during planning, project development, design, and other implementation phases.

The Task Force developed a series of 13 guiding principles and associated instructions. The text below lists the specific guiding principles and instructions with supporting text to document the intent of the Task Force. The guiding principles function as an integrated set and are not presented in a specific priority order.

**CONSISTENCY WITH STATEWIDE, REGIONAL, AND LOCAL PLANS**

The Task Force recognizes that there are plans specifically called out in statute, where consistency is the standard by law or policy; these include the local government comprehensive plans, metropolitan long-range transportation plans, strategic regional policy plans, and the statewide Florida Transportation Plan (FTP). They stressed the importance of preventing growth from occurring in areas that have not planned for that growth. The following guiding principle and instructions were developed by the Task Force to address the consistency issue. *It is important to note that this is considered a cross-cutting guiding principle with associated instructions to serve all high-level needs and support all other guiding principles in this report.*

**Guiding Principle #1**: Be consistent with statutorily required statewide, regional, and local plans including the local government comprehensive plans, Long-Range Transportation Plans (LRTPs), strategic regional policy plans, and the Florida Transportation Plan (FTP).

**Instructions:**

- Be consistent with goals, objectives, policies, and resources identified in local government comprehensive plans (s. 163.3177, F.S. and s. 163.3178, F.S.), metropolitan long-range transportation plans (s. 339.175, F.S.), and strategic regional policy plans (s. 186.507, F.S.), placing emphasis on future land use maps and growth projections, as well as regional and community visions as adopted into strategic regional policy plans and/or local government comprehensive plans.

- Be consistent with the vision, goals, and strategies of the FTP (s. 339.155, F.S.).

- Coordinate among agencies and local governments to assist with identifying possible changes to statutorily required state, regional, and local plans related to transportation corridors and future growth and development projections, including differences related to the timing and horizon years of plan updates as well as the geographical areas covered by regional plans.

- Coordinate among local governments, regional planning councils, metropolitan planning organizations, the Florida Department of Economic Opportunity (DEO), and FDOT on plan updates.

- Identify needs to update statutorily required plans to address Task Force recommendations, such as designation and management of transportation corridors (s. 337.273, F.S.), and consideration of whether areas around potential interchange locations contain appropriate land use and environmental resource protections (s. 338.2278, F.S.),
MAXIMIZE USE OF EXISTING FACILITIES

The Task Force emphasized the importance of examining the potential to upgrade or use existing transportation facilities or utility corridors to meet the purpose and need of the corridor before planning a new greenfield corridor. They emphasized the importance of exploring opportunities to upgrade existing roadways or construct the corridor with or within existing facilities or right of way (major roadway or utility) to minimize the project footprint and impacts, in addition to using the upgrades or redesign to improve the environmental design of existing roadways. The following guiding principle and instructions were developed by the Task Force to address the use of existing facilities. This is considered a cross-cutting guiding principle with associated instructions to serve all high-level needs and support all other guiding principles in this report.

Guiding Principle #2: Evaluate potential alternatives for addressing the M-CORES purposes and interregional statewide connectivity and mobility needs in this priority order:

1. Make safety and operational improvements to existing transportation facilities.
2. Add capacity to existing transportation facilities or other publicly owned right-of-way in or near the study area, including co-location of facilities within existing disturbed right-of-way and other approaches to transforming existing facilities and right-of-way to accommodate additional modes, uses, and functions.
3. In circumstances where purpose and need and/or guiding principles cannot be addressed by operational or existing facility improvements, then evaluate new alignment alternatives.

Instructions:

- Identify and advance safety and operational improvements to existing transportation facilities, particularly those that would be adjacent to a new or improved north-south corridor.
- Evaluate potential capacity improvements to a broad range of existing transportation facilities (rail and roadway) in or near the study area, including their impact on surrounding environmental resources, land uses, and communities.
- Evaluate opportunities for co-location within or adjacent to existing disturbed rail, utility, and roadway right-of-way in or near the study area, including their impact on surrounding environmental resources, land uses, and communities.
- Give priority to exploring opportunities for co-location along existing major roadways and major utility easements.
- Assess connectivity gaps between existing transportation facilities and areas identified as priorities for attraction, and potential opportunities for closing those gaps.
- Advance specific improvements that support a system meeting the long-term needs of statewide and interregional flows of people and freight.
- Collaborate with local governments, regional planning councils, metropolitan planning organizations, and DEO on operational improvements, existing facility enhancements, and, if needed, interchange locations to ensure consistency with local government comprehensive plans. This collaboration should consider how proposed improvements can help enhance the vitality of the residential and business communities and provide access to vital resources (police, fire, shelters, etc.).
**TECHNOLOGY**

The Task Force encouraged FDOT to explore ways for new and emerging technology to meet the needs of the corridor and potentially reduce impacts to the natural and human environment. The following guiding principle and instructions were developed by the Task Force to address technology. *This is considered a cross-cutting guiding principle with associated instructions to serve all high-level needs and support all other guiding principles in this report.*

**Guiding Principle #3:** Incorporate technology into corridor planning, design, construction, operations, and maintenance. Accommodate emerging vehicle and information technologies such as autonomous, connected, electric, and shared vehicles (ACES) and mobility as a service (MaaS).

**Instructions:**
- Leverage existing technology to help avoid, minimize, or mitigate adverse impacts from the corridor.
- Consider how future and emerging technologies, such as electric and automated vehicles, may be accommodated.
- Apply innovative planning and design strategies such as using state-of-the-art and/or energy efficient methodologies, technologies, and materials to develop the corridor.
- Plan and design the corridor to accommodate technologies/applications, considering their ability to evolve/adapt over time.
- Plan for and provide infrastructure for electric vehicle charging stations.

**RESILIENCE**

The Task Force stressed the importance of ensuring that new or improved infrastructure is designed to address existing vulnerability to flooding, storm surge, sea-level rise, and other risks and adapt to significant changes or unexpected impacts to make the state’s transportation system more resilient. The following guiding principle and instructions were developed by the Task Force to address infrastructure resilience. *This is considered a cross-cutting guiding principle with associated instructions to serve all high-level needs and support all other guiding principles in this report.*

**Guiding Principle #4:** Plan and develop a corridor that considers vulnerability to risks such as inland flooding, storm surge zones, and changing coastlines/sea-level rise. Design and construct infrastructure to withstand and recover from potential risks such as extreme weather events and climate trends.

**Instructions:**
- Identify sea-level-rise projections appropriate to the planning horizon of road and bridge infrastructure.
- When developing and evaluating corridors, place a high priority on the ability of co-located or new infrastructure to withstand and recover from storm surge (tropical storm through category 5), inland flooding, extreme weather events, and climate trends.
- When developing improvements along co-located roadways, identify opportunities to enhance those roads to address deficiencies in design standards or elevation related to water quality, water quantity, inland flooding, sea-level rise, and storm surge.
TRANSPORTATION MODES

The Task Force emphasized the importance of examining opportunities to include other transportation modes such as shared-use trails, freight and passenger rail, and public transit in the corridor. They encouraged FDOT to think beyond personal automobile travel to meet a variety of mobility needs and travel options and to look for ways that this corridor can improve exiting gaps in greenways and trails. The following guiding principle and instructions were developed by the Task Force to address multimodal transportation. \textit{It is important to note that this is considered a cross-cutting guiding principle with associated instructions to serve all high-level needs and support all other guiding principles in this report.}

**Guiding Principle #5**: Plan, design, construct, and operate a corridor that accommodates multiple modes of transportation.

**Instructions:**
- Consult with local communities and the public on needs and preferences for multimodal forms of transportation that could be included with the corridor.
- Consider innovative planning and design strategies to accommodate multiple modes of transportation.
- Enhance mobility and accessibility in areas with high concentrations of transportation-disadvantaged populations.
- Review applicable metropolitan planning organization long-range transportation plans, local government comprehensive plans, and transit development plans. Use these plans to help inform and refine the corridor’s purpose and need for evaluating modal solutions and identifying potential alternatives.
- Prioritize closing gaps on high priority segments in the Florida Greenways and Trails System Plan.

COMMUNITY IDENTITY AND CHARACTER

Enhancing communities was an area of focus for Task Force members. While they recognized the need to enhance the quality of life for residents, they also emphasized the importance of preserving many of the rural qualities of this area. They stressed the importance of allowing flexibility so that each community can determine its preferences for corridor location and access (including bypasses and interchanges) and aesthetics based on individual community needs and visions. The following guiding principle and instructions were developed by the Task Force to address the need to preserve and improve the rural character and quality of communities in the study area.

**Guiding Principle #6**: Seek opportunities to maintain and enhance the rural character and quality of life in communities, and ensure the corridor provides for their future vitality.
Instructions:
- Work with communities on preferences to enhance and maintain the safety, quality of life, and character of communities. Community preferences for incorporation into corridor planning, interchange locations, additional infrastructure needs, and project development may include:
  - access (toll vs. limited access and access locations),
  - aesthetics (including signs, billboards, etc.) and native landscaping,
  - branding, and
  - signage.
- Explore opportunities to view, understand, and access the environmental uniqueness of the Big Bend Ecosystem.
- Plan, design, construct, operate, and maintain a corridor that recognizes and incorporates the surrounding community character (including downtown areas and social and cultural centers) while accommodating potential growth and development. Balance the need to move vehicles safely and efficiently while preserving and enhancing scenic, aesthetic, historic, and environmental resources.

HISTORIC AND CULTURAL RESOURCES
The Task Force discussed many of the important cultural resources in the study area including historic districts and archaeological sites that contribute to the community and enhance the quality of life in the study area. They encouraged the preservation, protection, and enhancement of existing resources as well as any new resources that are discovered throughout the planning and project development process. The following guiding principle and instructions were developed by the Task Force to address the need to preserve and improve the rural character and quality of communities in the study area with regards to historic and cultural resources.

Guiding Principle #7: Avoid adverse impacts to these identified resources:
- Known cultural sites with human remains
- Known cemeteries
- Lands owned by Native American Tribes
- Historic resources listed on the National Register of Historic Places (NRHP)

If new resources are discovered, they will be addressed consistent with state and federal policies and regulations.

Instructions:
- Work with communities and their stakeholders to identify needs for enhancement or protection of historic and cultural resources.
- Follow (FDOT) Project Development & Environment (PD&E) Manual; Part 2 Chapter 8, Section 106 of the National Historic Preservation Act (NHPA) of 1966 as amended; 36 Code of Federal Regulations (CFR) Part 800; and the Florida Historical Resources Act (FHRA), Chapter 267, Florida Statutes (F.S.), for coordination of involvement with historic and cultural resources, including lands owned by Native American Tribes.
Among the six statutory purposes for M-CORES, protecting the environment and natural resources was the focus of the greatest portion of the Task Force’s discussion time. The Task Force acknowledged its statutory direction to evaluate design features and the need for acquisition of state conservation lands that mitigate the impact of project construction on the water quality and quantity of springs, rivers, and aquifer recharge areas and on wildlife habitat. The Task Force also recognized the potential impacts of corridor development on significant environmental resources in the study area from both direct impacts from corridor development as well as indirect impacts from future population and economic growth and land development that could occur in areas with greater transportation connectivity, particularly around interchanges.

The Task Force developed an integrated approach for addressing environmental resources including conservation lands, wildlife and plant habitat, and water resources. This approach reflects a priority order of first, avoiding negative impacts to resources; second, enhancing, restoring, and connecting resources; and third, minimizing or mitigating negative impacts.

To help implement this approach, FDOT identified and committed to specific environmental resources that will not be impacted by a corridor or where no new corridor will be placed through the resource, such as existing conservation lands or habitat already fragmented by existing transportation facilities. In these cases, the existing facilities or right of way could be improved, but steps should be taken to enhance or restore the environmental resource at the same time. In addition, the Task Force identified other important resources where avoidance is not explicitly defined at this time, but where great care should be taken to evaluate potential corridors and their impacts moving forward.

In addition, the Task Force recognized the opportunities to contribute toward broader regional and statewide environmental goals through the decisions made about corridor development as well as the abilities the statute provides to FDOT regarding right of way acquisition and other mitigation activities. The Task Force also recommended that FDOT commit to working closely with other local, regional, state, and federal agencies and nongovernmental organizations to advance key priorities such as high-priority land conservation, water quality and quantity (flow) improvements, habitat and water resource protection, and ecosystem connectivity initiatives developed by other partners.

The following guiding principle and instructions were developed by the Task Force to address the purpose and need to protect the environment and natural resources and to restore, enhance, and connect public and private environmentally sensitive areas and ecosystems.

**Guiding Principle #8:** Avoid adverse impacts to these identified resources:

- **Do not impact:**
  - Springheads
  - Named Lakes
  - High-Risk Coastal Areas
• Apply the following priority order for all of the below-listed resources:
  1. Avoid negative impacts to these resources
  2. Enhance, restore, and connect these resources while continuing to avoid negative impacts
  3. Minimize and mitigate negative impacts to these resources

FDOT will consider these resources during the development, analysis, and comparative evaluation of project alternatives including the no-build option. Resources include:

• Do not develop a new corridor through:
 ➢ Coastal Areas
 ➢ Aquatic Preserves
 ➢ Mitigation Banks
 ➢ Florida Forever Acquired Lands
 ➢ Managed Conservation Areas
 ➢ State Forests
 ➢ State Parks

• Additional resources identified as priorities by Task Force members:
  ➢ Waccasassa Flats
  ➢ Federal Emergency Management Agency (FEMA) Floodways
  ➢ Southwest Florida Water Management District (SWFWMD) Surface Water Sites
  ➢ SWFWMD Groundwater Sites
  ➢ SWFWMD Atmospheric Sites
  ➢ SWFWMD Proposed Well Sites
  ➢ Water Management Lands (including Fee and Conservation Easements)
  ➢ State Owned Lands
  ➢ Other Park Boundaries
  ➢ Wildlife Refuges
  ➢ Florida Forever Targeted Property
  ➢ Prime Farmland
  ➢ Springs Priority Focus Areas
  ➢ Tri-Colored Bats, Critical Wildlife Areas
  ➢ Florida Ecological Greenway Network – Priority 1 & 2
  ➢ Aquifer Recharge Priorities
  ➢ Surface Water Resource Priorities
  ➢ Rare Species Habitat Conservation Priorities
  ➢ Preservation 2000 Lands
  ➢ Basin Management Action Plans (BMAPs)
  ➢ Natural Resources of Regional Significance
**Instructions:**

**GENERAL**
- Place a high priority on avoiding impacts to:
  - Florida Ecological Greenway Network – Priority 1 and 2 lands
  - High Priority Critical Lands and Waters Identification Project (CLIP) lands

**CONSERVATION LANDS**
- Continue to identify and prioritize private and public conservation lands for enhancement or avoidance.
- Coordinate with agencies and partners early in the project development process to identify land acquisition plans and identify strategic opportunities to advance acquisition and funding priorities [including s. 338.2278 (3)(c)(6) & (8), F.S.] with the intent to acquire lands prior to or in parallel with corridor development.
- Coordinate with the Florida Department of Environmental Protection and other agencies for Florida Forever Program projects that are in the highest priority for acquisition (including consideration for Florida Ecological Greenway Network Priority 1 & 2), potential Water Management District lands, conservation easements by land trusts, and lands within the optimal boundaries of the adopted management plans for regional, state and national parks, forests, refuges, and water management areas.
- Minimize impacts of transportation lighting on nearby agricultural, environmental, and conservation lands.

**WILDLIFE HABITATS**
- Continue to identify and prioritize wildlife areas for enhancement or avoidance.
- Ensure the corridor minimizes impacts to wildlife corridors and that high priority is given to design features that establish functional wildlife crossings that maintain connectivity of critical linkages to provide for adequate wildlife/water passage.
- Use best available technology to limit impacts to wildlife including road kills, and notify vehicles of other hazards such as smoke from prescribed burns and wildfires.
- Coordinate with the Florida Forest Service to identify lands managed with prescribed or controlled burns and their associated smokesheds and minimize impacts associated with corridor location and operations.
- Consult with state and federal agencies to identify and protect threatened and endangered species (wildlife and plants) and their habitats.

**WATER RESOURCES**
- Work with local governments and the water management districts to ensure best management practices (BMPs), local/known data (including historic flooding areas), and emerging technologies are utilized to maintain, restore, and enhance water quality and mitigate inland flooding issues within the corridor.
- Continue to identify and prioritize water resources for enhancement or avoidance.
• Look for opportunities to improve water quality and quantity (flow) and reduce water quality/quantity deficiencies as part of new corridor construction as well as upgrades to existing facilities that do not have the benefit of environmentally friendly design and modern stormwater improvements.

ECOSYSTEM CONNECTIVITY
• Continue to identify and prioritize ecosystems for enhancement or avoidance while considering wildlife-crossing linkages and overall ecosystem connectivity.
• Work with local organizations and businesses to understand the needs for ecotourism improvements and protections.

ECONOMIC DEVELOPMENT
Economic development was another major focus area for the Task Force as it serves several purposes including revitalization of rural communities, job creation, and enhancing the quality of life. They discussed the importance of agricultural businesses in the study area and their contribution to the local, regional, and state economies. The also stressed the importation of economic diversification. The following guiding principle and instructions were developed by the Task Force to address the need to enhance economic and workforce development, access to education, and job creation in the study area.

Guiding Principle #9: Maximize opportunities to enhance local community and economic development with an emphasis on rural areas. Avoid and minimize adverse economic impacts to individual communities, businesses, and resources.

Instructions:
• Be consistent with economic development elements of local government comprehensive plans (s. 163.3177, F.S. and s. 163.3178, F.S.), and comprehensive economic development strategies developed by regional planning councils in their capacity as federal economic development districts.
• Conduct early outreach to communities and the public and private sectors to fully understand economic development needs including job training, education, and workforce development.
• Give priority to and enhance potential economic development opportunities and employment benefits in the study area by providing, improving, or maintaining accessibility to activity centers, employment centers, learning institutions, and agricultural lands, and locating interchanges in a manner that is consistent with the local government existing and future land uses.
• Build on existing economic development priorities and plans by state and local organizations including economic development organizations, partnerships, chambers of commerce, and regional planning councils. Work with the community and organizations to look for opportunities for the corridor to help them reach their economic development goals.
• Review analysis done by local, state, and federal agencies to further support opportunities for recreational tourism.

AGRICULTURAL LAND USES
The Task Force acknowledged its statutory direction to evaluate design features and the need for acquisition of state conservation lands that mitigate the impact of project construction on agricultural land uses. The Task Force emphasized the importance of protecting and enhancing the abundance of
productive agricultural lands (including mining and silviculture) in the study area as they serve both
environmental and economic purposes and contribute to revitalization of rural communities through job
creation and protection of the environment. They encouraged FDOT to work with local government,
state/federal agencies, and private agricultural/farmland organizations on protection and enhancement
of these resources. The following guiding principle and instructions were developed by the Task Force
to address the need to improve connectivity to agricultural businesses, manufacturing, warehousing,
freight terminals, and intermodal logistics centers.

**Guiding Principle #10:** Plan and develop a transportation corridor in a manner that protects the
region’s most productive agricultural lands and other rural lands with economic or environmental
significance. Improve transportation connectivity to, from, and between working farms and other
economically valuable rural lands.

**Instructions:**
- Work with landowners/operators of agriculture, silviculture, mining, equine, aquaculture,
horticulture, and nursery lands to understand their needs and plans.
- Emphasize protection and enhancement of farmland preservation areas designated within local
government comprehensive plans and lands in the Florida Rural and Family Lands Program,
and other farmland conservation programs.
- Minimize the fragmentation of agriculture, forestry tracts, and facilities, and consider how the
project could affect mobilization of equipment and prescribed burning activities.

**HIGHWAY SAFETY**
Enhancing public safety was also an area of focus for Task Force members. The following guiding
principle and instructions were developed by the Task Force to address the need to enhance travel
options and safety for all transportation users.

**Guiding Principle #11:** Plan, design, construct, and operate a corridor that safely accommodates
multiple modes of transportation and types of users.

**Instructions:**
- Reduce transportation incidents and improve response by using advanced safety strategies
  including innovative technology, design, and operations.
- Consult with the Florida Highway Patrol (FHP) and counties to determine current
  bottlenecks/safety hazards and mitigate or correct these issues during the design phase.
- Identify opportunities for additional truck parking facilities.

**EMERGENCY MANAGEMENT**
The Task Force emphasized the importance of ensuring the corridor supports existing emergency
management plans. The following guiding principle and instructions were developed by the Task Force
to address the need to enhance emergency management at the local, regional, and state levels.

**Guiding Principle #12:** Support and enhance local, regional, and state emergency management plans
and studies in all phases: mitigation, preparedness, response, and recovery.
Instructions:

• Evaluate the immediate and long-term needs and demand for emergency evacuation and sheltering at the local, regional, and state levels for natural and man-made disasters (including but not limited to flooding, hurricanes, wildfires, terrorist threats/attacks, industrial accidents/chemical spills, etc.).

• Consider both existing state and local emergency response plans and ongoing updates to the Statewide Regional Evacuation Studies underway by the Florida Division of Emergency Management and the regional planning councils, including updated data being developed on travel behavior during emergencies.

• Support emergency evacuation needs by enhancing emergency evacuation and response time including providing, maintaining, or expediting roadway access to emergency shelters and other emergency facilities.

• Conduct additional emergency management needs analysis as part of the project-related traffic studies.

• Identify opportunities for fueling facilities and charging stations.

BROADBAND AND OTHER UTILITIES

The Task Force emphasized the importance of ensuring the corridor supports the need to expand broadband and utility service (water, sewer, electric, gas, etc.) to the area for the purposes of revitalizing rural communities, encouraging job creation, and leveraging technology. The following guiding principle and instructions were developed by the Task Force to address the need to expand rural broadband infrastructure and access to broadband service in the study area.

Guiding Principle #13: Plan and design the corridor to enable co-location of broadband and other utility infrastructure in right-of-way. Plan for broadband and other utility needs at a regional scale, independent from the transportation facility; address these needs through the corridor, where feasible.

Instructions:

• Ensure broadband provider access to FDOT right-of-way is non-discriminatory and competitively neutral.

• Coordinate with private internet service providers (ISPs) to determine how construction of the corridor identifies opportunities for reducing rural broadband deployment costs.

• Support local governments and utility providers regarding existing and planned utility projects, including identifying opportunities within the study area to co-locate and/or extend utilities within and adjacent to transportation corridors.

• Explore opportunities to coordinate with local governments and utilities for septic to sewer conversions to improve quality of life and water quality, with an emphasis on higher density communities and areas targeted in BMAPs.
**Action Plan**

In addition to the high-level needs, guiding principles, and instructions, FDOT commits to the following actions to move forward with implementation of the recommendations of the Task Force’s report in developing the M-CORES program in this study area, consistent with s. 338.2278, F.S.:

1. **Evaluate potential needs.** FDOT will work with partners to conduct a robust evaluation of potential corridor needs, building on the Task Force’s recommendations on high-level needs. This process will evaluate and distinguish between conventional safety, mobility, and connectivity needs, and broader needs or co-benefits related to transportation, such as economic development or environmental stewardship benefits. The needs evaluation will include a detailed technical analysis of current and future traffic conditions in the study area building on the guidance provided by the Task Force in this report. The needs evaluation will include the best available data and most recent projections on travel demand and underlying population and economic growth. This needs analysis will support development of a Purpose and Need statement for potential corridor improvements.

2. **Identify and evaluate alternatives.** FDOT will conduct additional corridor planning activities, including the Alternative Corridor Evaluation process, and initiate the Project Development and Environment (PD&E) process to identify and evaluate a range of potential alternatives for corridor improvements in or near the study area that could accomplish the Purpose and Need.

These alternatives will consider operational and capacity improvements, existing and new facilities including co-location options, and a “no build” option. Consideration will be given to multiple transportation modes and to application of emerging technologies. The alternatives will be consistent with the guiding principles and instructions developed by the Task Force.

The alternatives evaluation will include the specific economic, environmental, land use, and emergency management impacts required in s. 338.2278(3)(c)4, F.S. and the standard processes outlined in FDOT’s PD&E manual. The evaluation will be consistent with the guiding principles and instructions recommended by the Task Force. The evaluation will consider the best available data on the full range of potential impacts.

The Task Force discussed the importance of considering a “no build” option during all stages of Planning and PD&E. FDOT confirmed that, according to both state and federal law and established procedures, a “no build” is always an option in the planning and PD&E processes. In this context, “no build” would mean no major capacity investments beyond those already committed in FDOT’s Five Year Work Program, as well as no associated investments related to land acquisition, broadband and other utilities, and other statutory capabilities specific to M-CORES. FDOT would continue to maintain the safety and operation of existing transportation system in this study area. As this early stage of planning and corridor development focused on the full study area, “no build” may refer to no major corridor capacity investments in the entire study area. During later phases as specific projects and segments are identified, “no build” would mean no capacity investments for that specific project area. The “no build” would remain an option throughout the PD&E process and be analyzed at the same level of detail as all “build” options, including consideration of economic, environmental, land use, and emergency management impacts and consistency with the guiding principles and instructions. The analysis of the “no build” also must include impacts on the study area such as the potential for increased
traffic on existing facilities, impacts to multimodal facilities, and impacts on emergency response times.

The planning process also will include initial, high-level consideration of potential costs and funding approaches based on reasonable assumptions at this early stage. It is not likely that any alternatives would be sufficiently defined at this stage to conduct detailed analysis of economic feasibility, but early identification of the order of magnitude of potential costs and funding sources can be used to support decision making on the range of alternatives including the “no build” option.

The planning and PD&E processes combined will narrow the range of alternatives and identify opportunities to segment corridor development into multiple projects. These processes also will produce more specific information about potential alignments, interchange locations, and other project features.

After the PD&E study is completed, the Florida Department of Environmental Protection will review the environmental feasibility of any projects proposed as part of Florida’s Turnpike system and submit a statement of environmental feasibility to FDOT, consistent with s. 338.223, F.S.

3. **Support consistency review and update of local and regional plans.** FDOT will coordinate early and often with local governments, metropolitan planning organizations (MPO), and regional planning councils (RPC) to ensure consistency with applicable local and regional plans throughout all activities. Consistent with s. 338.223, F.S. and with the Task Force’s guiding principles, proposed corridor projects must be consistent, to the maximum extent feasible, with applicable approved local government comprehensive plans, included in the transportation improvement plan (TIP) of any affected MPOs, and developed in accordance with the Florida Transportation Plan and FDOT’s Five Year Work Program.

As required by s. 338.2278(3)(c)10, F.S., FDOT will provide affected local governments with a copy of the Task Force report and project alignments identified through the PD&E process so each local government with one or more planned interchanges within its jurisdiction can meet the statutory requirement to review the Task Force report and local government comprehensive plan no later than December 31, 2023. Each local government will consider whether the area in and around the interchange contains appropriate land uses and environmental protections and whether its comprehensive plan should be amended to provide appropriate uses and protections. FDOT will coordinate with the local governments, RPCs, and Florida Department of Economic Opportunity (DEO) to assist with plan updates, including consideration of technical and financial support needs.

4. **Assess economic feasibility and identify potential funding sources.** Following PD&E, FDOT will evaluate the economic feasibility of the corridor at the 30 percent design phase, when sufficient information is available to assess the ability to meet statutory requirements for projects as part of Florida’s Turnpike system consistent with s. 338.223, F.S. The economic feasibility will account for required costs to develop and implement the corridor, such as engineering, right-of-way, construction, mitigation, enhancement, and utility costs. These would include typical corridor costs plus FDOT’s contribution toward the additional corridor elements related to environmental enhancements or multi-use opportunities as envisioned in statute. This economic feasibility test will focus on specific corridor projects; additional analyses may be needed to examine the cost and funding of all M-CORES program initiatives.
FDOT also will identify potential funding sources for preferred corridor alternatives identified during PD&E, including a combination of the specific sources allocated to the M-CORES program in s. 338.2278, F.S.; toll revenues and associated Turnpike revenue bonds; right of way and bridge construction bonds or financing by the FDOT Financing Corporation; advances from the State Transportation Trust Fund; funds obtained through the creation of public-private partnerships; and other applicable state, local, and private revenue sources.

FDOT has committed that projects currently in its Five-Year Work Program for Fiscal Years 2021-2025 will not be impacted by M-CORES funding needs. M-CORES program costs that are not covered through the dedicated funding sources identified in statute or through toll revenues and associated Turnpike revenue bonds and other financing and partnerships would need to be prioritized along with other needs for future Five-Year Work Programs, working through the standard process including the applicable MPO TIP and rural transportation planning processes. All M-CORES projects, regardless of funding source, will be included in applicable MPO TIPs and long-range transportation plans, consistent with federal guidance for projects of regional significance.

5. Advance innovative land acquisition concepts. FDOT, in consultation with the Florida Department of Environmental Protection, Florida Fish and Wildlife Conservation Commission, Florida Department of Agriculture and Consumer Affairs, and relevant federal agencies, will advance the Task Force’s recommendations for combining right-of-way acquisition with the acquisition of lands or conservation easements to facilitate environmental mitigation or ecosystem, wildlife habitat, or water quality protection or restoration. A key focus will be on how M-CORES program decisions can support broader regional or statewide conservation and environmental stewardship goals, such as priorities in the Florida Ecological Greenway Network. This process will identify opportunities to advance specific land acquisition and related recommendations prior to or in parallel with corridor construction. FDOT will determine how to provide funding, in whole or part, for land acquisition projects consistent with its statutory authority in s. 338.2278(3)(c) 6, with the expectation that FDOT funding supplements and leverages other state, federal, local, private, and nonprofit sources. FDOT will work with DEP, FWC, water management districts, and nongovernmental organizations to explore potential indicators for setting and tracking progress toward land conservation goals.

6. Advance multi-use opportunities. FDOT will coordinate with local governments, RPCs, other state agencies, and industry organizations to advance multi-use opportunities for the corridor as provided for in statute. An early emphasis will be on broadband and other utility co-location opportunities, including coordination with DEO on the development of the statewide broadband strategic plan. FDOT will determine how to provide funding, in whole or part, for broadband consistent with its statutory authority in s. 339.0801, F.S., with the expectation that FDOT funding supplements and leverages other state, federal, local, private, and nonprofit funding sources.

7. Continue robust partner and public engagement. FDOT will continue robust coordination with local governments; regional, state, and federal agencies and environmental, community, economic development, and other interest groups, with an intent of exceeding the requirements of the PD&E process. FDOT will use the Efficient Transportation Decision Making process to facilitate early and ongoing coordination with resource agencies. FDOT also will create ongoing opportunities for the range of organizations involved in the Task Force process to be informed
about and provide input to subsequent planning and project development activities, such as periodic meetings to reconvene Task Force member organizations in an advisory role. FDOT also will create multiple ongoing opportunities for members of the public to be aware of and provide input to this process, with emphasis on direct engagement of the public in local communities.

8. **Commit to transparency and process improvement.** Because of the scale and scope of the M-CORES program, FDOT will continue to place public engagement as a priority and will continue to engage all stakeholders during M-CORES planning, project development, and implementation, including key decision points. FDOT also will report on how decisions are made, including a periodic report on the status of the specific guiding principles and instructions committed to in this document. An annual M-CORES budget update will be made publicly available as part of FDOT’s annual work program presentation to the Legislature and the Florida Transportation Commission.

FDOT also recognizes the need for continued improvements to its planning, project development, and related processes to fully implement the M-CORES purpose and objective as identified in statute and the guiding principles and instructions as recommended by the Task Force. This may include the need for additional technical and financial support for the activities identified in this report for enhanced planning, collaboration, and public engagement.

The specific commitments in this Action Plan indicate how FDOT will work with local governments and other agencies and partners to carry out the Task Force’s recommendations for the M-CORES program in the full study area, augmenting established statutory requirements and FDOT procedures. Specific corridor projects identified through this process will advance based on determination of need, environmental feasibility, economic feasibility, and consistency with applicable local government comprehensive plans and MPO TIPs.

| **Task Force Meeting #5**  
March-April 2020  
*Note: Task Force Meeting #5 conducted in person for Southwest-Central Florida Corridor Task Force and as a "virtual task force meeting" (distribution of presentations and materials) for Suncoast Corridor and Northern Turnpike Corridor Task Forces** |  
- Discuss corridor utility needs and opportunities  
- Discuss draft high-level needs summary  
- Review public engagement activities and public input received to date  
- Review additional data requested by Task Force and proposed Task Force avoidance comments  
- Discuss existing corridor enhancement opportunities  
- Refine draft AMME guiding principles  
- Receive public comment |
| **Task Force Webinar #1**  
April 2020 |  
- Receive update on Task Force activities  
- Receive briefing on process for identifying avoidance and attraction areas as input to Task Force recommendations  
- Describe “homework” process for receiving Task Force member input prior to next in-person meeting  
- Receive public comment |
| **Task Force Webinar #2**  
May 2020 |  
- Receive briefing on emerging technology trends and opportunities  
- Discuss implications of emerging technologies for corridor development  
- Receive public comment |
| **Task Force Webinar #3**  
June 2020 |  
- Receive briefing on opportunities for coordination of broadband deployment with corridor development  
- Obtain Task Force member input on implications for high-level needs and guiding principles  
- Receive public comment |
| **Task Force Virtual Meeting #4**  
June 2020 |  
- Receive update on Task Force work plan and recommendations framework  
- Receive update on avoidance and attraction layers  
- Refine high-level needs and guiding principles and identify potential instructions for project development and beyond  
- Receive public comment |
| **By June 30, 2020** |  
- FDOT submits report on Construction Workforce Development Program to Governor and Legislature |
| **Task Force Meeting #6**  
July 2020 |  
- Review public engagement activities  
- Establish initial consensus on high-level needs  
- Discuss and refine draft guiding principles  
- Discuss draft instructions for project development and beyond  
- Review draft report outline and report drafting process  
- Review corridor planning activities  
- Receive public comment |
| **July 2020** |  
- Florida Transportation Commission presentation |
